

For Unattended Direct Solar- Radiation Measurements

Overview

The CHP1-L, manufactured by Kipp & Zonen and cabled by Campbell Scientific, is a pyrhiometer used for unattended direct solar-radiation measurements. It is designed specifically

to measure the direct beam solar irradiance with a field of view limited to 5 degrees. This is achieved by the shape of the collimation tube, precision apertures, and the detector design.

Benefits and Features

- ▶ ISO First Class
- ▶ Built-in temperature sensors

Detailed Description

To monitor direct normal irradiance, a CHP1 Pyrhiometer is mounted to a user-supplied sun tracker such as Kipp & Zonen's Solys2. The CHP1 pyrhiometer measures the direct-beam solar irradiance with a field of view limited to 5 degrees. The

limited field of view requires the CHP1 to be continuously pointed toward the sun. The Solys2 Sun Tracker rotates on two axes and uses a GPS receiver to keep the CHP1 aimed at the sun throughout the day.

Specifications

Sensor	Pyrhiometer
Measurement Description	Measures the direct beam solar irradiance with a field of view limited to 5 degrees
Spectral Range	200 to 4000 nm
Sensitivity	7 to 14 $\mu\text{V}/\text{W}/\text{m}^2$

Response Time	< 5 s
Zero Offset B	< 1 W/m^2
Temperature Dependence of Sensitivity	< 0.5% (-20° to +50°C)
Field of View (FOV)	5° \pm 0.2°

Operating Temperature Range	-40° to +80°C
Non-Linearity	< 0.2%
Maximum Irradiance	4000 W/m ²
International Standards	First Class ISO

Body Diameter	3.8 cm (1.5 in.)
Base Diameter	7.6 cm (3.0 in.)
Length	31.6 cm (12.4 in.)
Weight	0.9 kg (1.98 lb) excluding cable
