

# RTMCR T

## Real-Time Monitor and Control Software, Run-Time Version

### Overview

Current Version: 5.0

RTMCR T is intended for applications in which several remote PCs need to display the same real-time data in the same

format. Remote PCs running RTMCR T can view and print RTMC projects created in the RTMC developer. One copy of RTMCR T is included with the purchase of LoggerNet or RTDAQ data logger support software. It is also sold independently for customers who need copies for remote computers.

### Benefits and Features

- › Allows you to run the real-time graphic display screen created in the RTMC developer
- › Displays real-time data
- › Automatically updates display screens

### Detailed Description

RTMC projects developed in the standard RTMC application or RTMC Pro are run using RTMC Run-Time. RTMC Run-Time is included with LoggerNet, LoggerNetAdmin, LoggerNetData, RTDAQ, and RTMC Pro. Additional RTMC Run-Time versions can be purchased separately and installed on computers that are networked to a LoggerNet computer. This allows remote PCs to display data in a graphical format from a LoggerNet server.

As LoggerNet collects data from the data logger, the displays in RTMC Run-Time are automatically updated. RTMC Run-Time also allows the user to change public variable values or input locations, as well as toggle ports/flags if those capabilities were enabled in the RTMC project during development.

For best performance, RTMCR T version 4.x should run projects developed in RTMC version 4.x development tools (standard RTMC Development or RTMCPro).

### Specifications

Current Version	5.0	Operating System	Windows 11, 10, 8, or 7 (32- and 64-bit operating systems are
-----------------	-----	------------------	---

supported.)

Requirement

Requires a licensed copy of  
LoggerNet, LoggerNetAdmin, or  
RTDAQ running on PC.
